# **ONE-HUNDRED-YEAR STORM ELEVATION REQUIREMENTS FOR HABITABLE STRUCTURES LOCATED SEAWARD OF A COASTAL CONSTRUCTION CONTROL LINE**

## **PURPOSE**

This document defines and provides the elevation standards for habitable structures located seaward of a coastal construction control line (CCCL), and the instructions for completing the CCCL Elevation Certificate required within section 3107 of the Florida Building Code.

The coastal construction control line delineates that area of the beach-dune system that is expected to be subject to severe fluctuation resulting from a one-hundred-year storm event. The one-hundred-year storm elevation requirements for habitable structures located seaward of the coastal construction control line ensure that the lowest horizontal structural member of the building is placed at an elevation above the predicted breaking wave crest.

Appendix A identifies the date the CCCL was recorded and its record plat location as filed in the Office of the Clerk of the Circuit Court of Public Records of each County.

Appendix B tabulates the one-hundred-year storm elevations and design grades for all coastal counties with established coastal construction control lines. The one-hundred-year storm elevation is the height of the breaking wave crest or wave approach as superimposed on the storm surge with dynamic wave set-up of a one-hundred-year storm. The design grade is the predicted eroded grade caused by the one-hundred-year storm event and should be considered by the design professional in the calculation of pile capacities and embedment depths of driven piles. All piles standing above the design grade should be designed as columns in accordance with the provisions of the Florida Building Code.

The maps contained in the document titled "Coastal County Maps" (not attached) are a compilation of coastal county maps that show the coastal construction control line and the location and identification number of the Florida Department of Environmental Protection (FDEP) range monuments.

## **INSTRUCTIONS FOR COMPLETING THE CCCL ELEVATION CERTIFICATE**

The certificate will be prepared by or under the direct supervision of a registered land surveyor or professional engineer or architect. As part of the permit process and upon placement of the lowest horizontal structural member, the property owner will submit, to the building official, a completed CCCL Elevation Certificate depicting the elevation of the lowest horizontal structural member of the lowest habitable floor, as constructed in relation to National Geodetic Vertical Datum (N.G.V.D.). This certificate will be approved by the building official prior to commencing any additional work. Any work undertaken prior to approval of the certificate will be at the property owner's risk. The building official will review the submitted elevation data, and any deficiencies found will be corrected by the permit holder immediately and prior to any further work being authorized to proceed.

---

### **SECTION A Property Information**

---

The CCCL Elevation Certificate identifies the building, its owner and the building location. Provide the building owner's name(s), the building's complete street address, and lot and block number.

---

### **SECTION B One-Hundred-Year Storm Elevation Information**

---

In order to complete this portion of the Elevation Certificate, it is necessary to refer to the tables provided in Appendix B and the appropriate county map in the document titled "Coastal County Maps" or the official recorded coastal construction control line maps located in the clerk of the court's office.

- 1. Referencing the "Coastal County Maps" or the official recorded CCCL maps, locate the property and note the nearest range monument to the property. Using the tables in Appendix B, locate the county name and range monument and record the one-hundred-year storm elevation for the property. ***Please note that the elevations listed in the tables represent the design wave height of a one-hundred-year storm, not the storm surge elevation. Also note that the building elevation may be affected by environmental issues addressed in the FDEP permit for construction seaward of the CCCL.***

- 2. The CCCL Elevation Certificate uses the bottom of the building's lowest horizontal structural member as the point for measuring its elevation. Diagrams 1 and 2 located below are to be used to help determine the location of the lowest horizontal structural member. Record the elevation measurement (to the nearest tenth of a foot) of the bottom of the lowest horizontal structural member as determined by the registered land surveyor, professional engineer or architect.
- 3. Record the benchmark used to establish the lowest horizontal structural member elevation along with the benchmark elevation in the space provided.

---

#### SECTION C Certification

---

Complete as indicated. The elevation certificate may only be signed by a registered land surveyor or professional engineer or architect registered by the State of Florida.

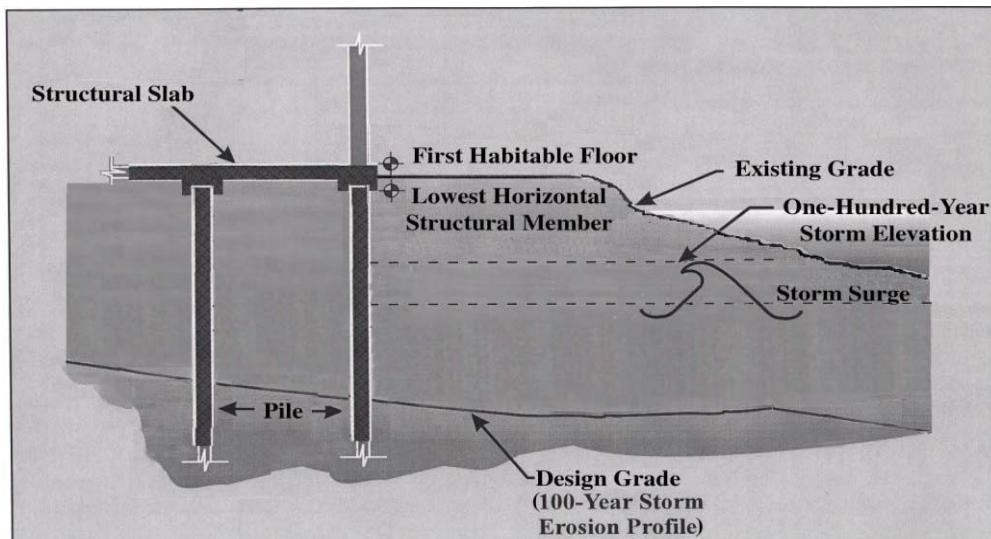

DIAGRAM 1

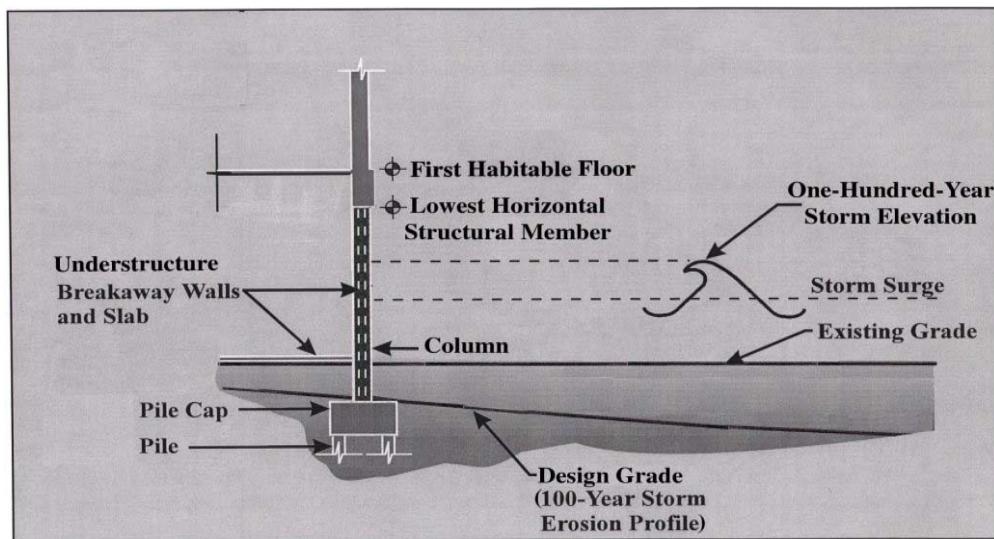

DIAGRAM 2

# CCCL ELEVATION CERTIFICATE

## FLORIDA DEPARTMENT OF ENVIRONMENTAL PROTECTION

This certificate is required by section 3107 of the Florida Building Code for habitable structures built seaward of a coastal construction control line to ensure the lowest horizontal structural member of such structures is located above the local one-hundred-year storm elevation as published in the Florida Department of Environmental Protection's document titled, "One-Hundred-Year Storm Elevation Requirements for Habitable Structures Located Seaward of a Coastal Construction Control Line". The elevation of the lowest horizontal structural member is to be shown in relation to National Geodetic Vertical Datum (N.G.V.D., 1929).

NOTICE: This certificate shall be completed as part of the permitting process and submitted to the building official who will note any deficiencies and notify the permit holder of any actions necessary to bring the structure into compliance with the elevation requirement. Any deficiencies found by the building official shall be corrected by the permit holder immediately and prior to proceeding with work. Any work undertaken prior to submission of this certification shall be at the property owner's risk.

## GUIDE TO THE COASTAL COUNTY MAPS

The coastal county maps are contained in the document titled "Coastal County Maps" created by the Department of Environmental Protection, Office of Beaches and Coastal Systems. The maps show the location of each county's coastal construction control line and are provided to give a general overview of the location of each coastal construction control line. The range monuments (R-monuments) shown on the maps are a statewide network of survey monumentation used, by the Department of Environmental Protection, on all of the state's sandy beach shoreline. The coastal county maps were created to provide a quick reference between a coastal property and its proximity to the R-monument.

The maps can be viewed on the Department of Environmental Protection, Office of Beaches and Coastal Systems, web site: [www.floridadep.org/beaches/](http://www.floridadep.org/beaches/)

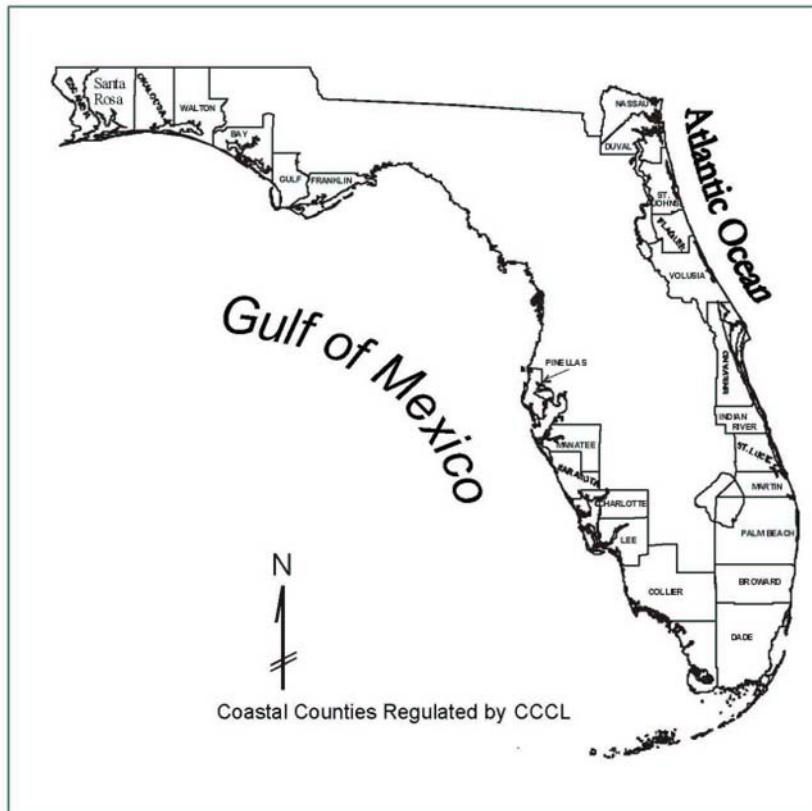

The maps are divided into regions of the state, northwest, southwest, northeast, and southeast. The maps are for information only and are not to scale.

### How to Obtain the Maps

Copies of the coastal county maps may be downloaded from the Office of Beaches and Coastal Systems, web site at: [www.floridadep.org/beaches/](http://www.floridadep.org/beaches/). In addition hard copies of coastal county maps are available for a nominal fee. To obtain a hard copy of the current map for a specific area, contact:

**Florida Department of Environmental Protection  
Office of Beaches and Coastal Systems  
3900 Commonwealth Blvd., MS 300  
Tallahassee, Florida 32399-3000**

To facilitate your request, review the current Maps on the web site, and obtain the page number you need or contact the Coastal Data Acquisition section of the Office at (850) 487-4471. The Office web site will also accept orders for maps.

## APPENDIX A

The table below identifies the date the CCCL was recorded and its record plat location as filed in the Office of the Clerk of the Circuit Court of Public Records of each County.

## APPENDIX B

### ONE-HUNDRED-YEAR STORM ELEVATION REQUIREMENTS

The following tables provide the one-hundred-year storm elevations and design grades, in relation to N.G.V.D., for all coastal counties with established coastal construction control lines. The computed one-hundred-year storm and design grade elevations and corresponding location relative to the current monument for each range of all twenty-five counties with an established CCL, are tabulated below. One county-wide average is applicable to thirteen out of the twenty-five counties, such as Okaloosa County. Table I, IV and VII show results for the Panhandle area, the Southwest Gulf area and the Atlantic area, respectively. Gulf County, the Alligator Point area of Franklin County, the area from Sanibel Island to the southern end of Lee County, and the area from the northern end of Collier County to Gordon Pass show results in Table II, III, V and VI, respectively.

Please note that the one-hundred-year storm elevations and design grades for Navarre Beach, Santa Rosa County are included under R192-209, of Escambia County.

The One-Hundred-Year storm elevation is the height of the breaking wave crest or wave approach as superimposed on the storm surge with dynamic wave set-up of a one-hundred-year storm. The design grade is the predicted eroded grade caused by the one-hundred-year storm event.

| County                     | Florida State Plan Coordinates for Range Monument |            |             | 100 - Year Storm Elevation (ft.) | 100 - Year Storm Design Grade |
